

# Configuration Report Preview

Reduce noise. Reweight risk. Align coaching logic.

See how ClearSignal reviews telematics settings, scoring logic, thresholds, automations, and policy alignment to reduce noise and sharpen safety signal.

## What the report is designed to solve

More alerts do not automatically create better safety decisions. Misaligned settings can create noise, hide true risk, and overload supervisors.

- ✓ Low-severity events crowd the Safety Inbox.
- ✓ High-risk behaviors may be weighted too lightly.
- ✓ Thresholds may trigger too late or too often.
- ✓ Scores may reflect alert volume instead of actual risk.
- ✓ Escalation decisions may vary by market or manager.

## What ClearSignal reviews

<p><b>Event settings</b> triggers, thresholds durations, nudges, alerts</p>	<p><b>Signal quality</b> noise, ambiguity repeatability, confidence</p>	<p><b>Score logic</b> whether score impact reflects actual safety risk</p>	<p><b>Automation rules</b> pattern triggers inbox routing, coaching tasks</p>	<p><b>Policy alignment</b> escalation rules documentation, role clarity</p>
---	---	--	---	---

## Sample report visuals

Anonymized examples inspired by the configuration audit structure.

<p><b>Priority Behavior Map</b></p>	<p><b>Configuration Matrix</b></p> <table border="1"> <thead> <tr> <th>Setting</th> <th>Current</th> <th>Recommended</th> </tr> </thead> <tbody> <tr> <td>Following Distan</td> <td>High volume</td> <td>Pattern-based</td> </tr> <tr> <td>Speeding</td> <td>Late trigger</td> <td>Earlier feedback</td> </tr> <tr> <td>Seatbelt</td> <td>Low sensitivity</td> <td>Nudge + trigger</td> </tr> <tr> <td>Drowsiness</td> <td>Noisy</td> <td>Wellness check</td> </tr> </tbody> </table>	Setting	Current	Recommended	Following Distan	High volume	Pattern-based	Speeding	Late trigger	Earlier feedback	Seatbelt	Low sensitivity	Nudge + trigger	Drowsiness	Noisy	Wellness check	<p><b>Scorecard Reweighting</b></p> <p>Goal: severity over alert volume</p>
Setting	Current	Recommended															
Following Distan	High volume	Pattern-based															
Speeding	Late trigger	Earlier feedback															
Seatbelt	Low sensitivity	Nudge + trigger															
Drowsiness	Noisy	Wellness check															

**IF** repeated priority behavior appears **THEN** create coaching task, assign priority, route owner, document decision

## What leaders receive

<p><b>Configuration findings</b> What is working, what is noisy, and what needs adjustment.</p>	<p><b>Priority behavior map</b> Which signals merit immediate coaching vs. trend-based review.</p>	<p><b>Scorecard recommendations</b> How weighting can separate true risk from alert volume.</p>	<p><b>Automation &amp; escalation roadmap</b> Clear If X -&gt; Then Y pathways for consistent decisions.</p>
